Sir:

In reply to the Examiner's Office Action dated September 18,, the following amendments and remarks are respectfully submitted in connection with the above-identified application.

IN THE CLAIMS:

The claims have been amended as follows:

4. (Amended) An acoustic wave apparatus comprising:

a piezoelectric substrate mainly containing lithium tantalate;

an interdigital transducer including a conductor formed on said substrate; and

a reflector including a conductor formed on said substrate,

wherein a surface rotated in a range of 34° to 41° from a crystal Y axis around a crystal X axis of the lithium tantalite is set as a surface of said substrate, a standardized electrode thickness (h/λ) obtained by standardizing a thickness h of an electrode finger constituting at least a part of said reflector by a wavelength λ of a surface acoustic
